Department of Electrical & Computer Engineering
PROJECT REPORT

Project Title:
Bus Ticket Management System

Faculty: Dr. Nova Ahmed

Course Instructor: Farzana Islam

Course Code: CSE 115

Course Title: Programming Language I

Date Of Submission: 22/12/2022

Section: 02

Introduction:

Through this program, a passenger can check our bus management system. They can see bus departure and arrival times and check ticket prices. After that, they can buy tickets from our system as they like.

Methodology:

In this project, we have used the following functions:

`void initialiseFile();`

`void readFileContents();`

`void UserPortalmenu();`

`void display();`

`void purchaseTicket();`

`void writeToFile();`

The whole program starts from these functions. In these functions, we have displayed the options that users can use. There are 3 to go through the options are:

1.View All Bus Schedule.

2.Purchase Ticket.

3.Exit and save data.

A passenger can choose any of these three options:

1.View All Bus Schedule:

If A passenger selects this option, they can see all the bus schedules.

2.Purchase Ticket:

If A passenger selects this option, they can see the ticket prices, how many seats are available in a bus and they also can purchase tickets.

3.Exit and save data:

If A passenger selects this option, their data will be stored in a file and exited from our system.

void initialiseFile();

This function stores the bus schedule, destination, arrival time, departure time, and the number of seats available in the BUS_MANAGEMENT.txt file using files and pointers.

void readFileContents();

Stored data is being read from the BUS_MANAGEMENT.txt file using files and pointers.

void UserPortalmenu();

This function is used to see the following options:

- 1.View All Bus Schedule.
- 2.Purchase Ticket.
- 3.Exit and save data.

void display();

This function will display these following options:

- 1.Bus No:
- 2.Arrival Time:
- 3.Departure Time:
- 4.From:
- 5.To:
- 6.Total seats available:
- 7.Ticket Price:

void purchaseTicket();

In this function, a passenger can know how many seats are available and the ticket prices. If the seat is available as per the passenger's request, the passenger will give his name and number. The ticket price will be charged according to the ticket amount. This function will reduce the number of seats later based on how many tickets a passenger has previously purchased. After a passenger successfully buys a ticket, this function will give him a purchase receipt.

void writeToFile();

Data is stored in the BUS_MANAGEMENT.txt file through this function using files and pointers.

Uses:

Through this program, a passenger can check our bus management system. They can see bus departure and arrival times and check ticket prices. After that, they can buy tickets from our system as they like.

Conclusion:

In Conclusion, this bus management system is a short display of managing a bus system operation. It features a passenger to see a bus's available schedule and seats. Passengers can easily buy tickets as their like by giving their information. It can be used to manage bus operations in a simple method.
